### EDITORIAL NOTICE

A second “Addendum to the Fifth Edition” of the *Dictionary of Minor Planet Names* was published on July 17 by Springer-Verlag (Berlin-Heidelberg-New York). With its 2006 predecessor (see *MPC* 56919), the work is not only a necessary “addendum” to *DMPN V*, with information about all the new namings of minor planets during 2006–2008 (actually, to Feb. 2009), but it is also a “corrigendum”, in that it contains corrections and other amendments to the earlier editions. Edited by L. D. Schmadel (Astronomisches Rechen-Institut, Heidelberg), the new volume (ISBN 978-3-642-01964-7) is priced at \$169.00 or €119.95.

### NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 66403. The longitudes  $\lambda$  are measured in degrees eastward from Greenwich, and the parallax constants  $\rho \cos \phi'$  and  $\rho \sin \phi'$  are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

Obs.	$\lambda$	$\rho \cos \phi'$	$\rho \sin \phi'$
